

Below map it show **TURBHE_2** interface **x23** is connected to **juveiyah_airoli**.

But interface x29 is connected to juveiyah_airoli. Same is showing in lldp table in TURBHE_2.

```
[TURBHE_2]dis lldp neighbor brief | i 0/29
XGE0/0/29      Juveiyah_Airoli      903c-b3d1-af7a      118
[TURBHE_2]
```

If we poll topology on TURBHE_2 we get below output..

```

[14.03.2024 09:27:06] **** Poll request sent to server ****

[14.03.2024 09:27:06] **** Poll completed successfully ****

```

Even after doing full configuration poll on TURBHE_2 result is same.
