```

■ Event Configuration

In the event configuration list, Garbage is added behind the message containing the multibyte character string.

No garbage is added behind messages that do not contain multibyte strings.

It seems that the contents of the explanation of the event on the first line are added to the garbage to be added.

■ Event Template

In the event template editing screen as well, Garbage is added behind the message containing the character string as with the event configuratio

No garbage is added behind messages that do not contain multibyte strings.
